TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), C

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, Flask, FastAPI, REST APIs, JWT Authentication

Databases: MongoDB, PostgreSQL, SQL

Generative AI: RAG, LangChain, FAISS, LLM APIs, Gemini API, Groq, Hugging Face, Ollama, Phi-3, Embeddings,

Tools: Git, GitHub, Unity-Web API Integration

WORK EXPERIENCE

Developer Intern — Metaverse 911 | [Experience Letter](#)

Jun 2026 – Aug 2026

- Developed **2 custom AI chatbots** for clients, designing separate prompt logic and data pipelines for each client's use case.
- Built the frontend for a client's full education platform (**TFG**) with multiple pages in **React.js**, making the layout responsive across devices and connecting it to backend **REST APIs** (details under Projects).
- Used **Unity-Web API integration** to build 1-2 interactive games and quizzes with touch-screen and **gesture-based controls** for Holobox displays (Unity, C#).
- Debugged production **CORS** and API data-handling errors flagged by the deployment team, keeping the platform stable and on schedule for the client.

Web Developer Intern — BNG | [Experience Letter](#)

Jul 2025 – Sep 2025

- Built **5+ responsive web pages** using HTML, CSS, and Bootstrap, applying a mobile-first approach across devices.
- Collaborated with the team on **2-3 multi-page event websites**, aligning fonts, colors, and spacing to keep the UI consistent across every page.

PROJECTS

PrepPilot AI — Personalized AI Interview Prep Platform

[Live Site](#) | [GitHub](#)

- Built a full-stack **Next.js** app with a dashboard and login that turns a job description and company URL into a ready-to-use prep kit.
- Used **Gemini API** and **web scraping** to extract key job requirements from descriptions and research the company, then generated targeted interview questions from that data.
- Added a **second verification pass** that checks generated questions against the job's must-have skills, so nothing is missed.
- Built a day-by-day study planner, confidence-rated flashcards, and a CLI tool for bulk job processing.

TFG — AI-Driven EdTech & Training Portal

[Live Site](#) | [GitHub](#)

- Built responsive frontend pages with **React.js** and **Tailwind CSS**, connecting them to secure **REST APIs** (Node.js/Express) to deliver a live education platform used by clients.
- Built an **API Configuration panel** to manage third-party API keys (OpenAI, Groq) from one place, removing hardcoded keys so the team no longer needs a redeployment to change them.
- Connected the web app and **Unity** through APIs, enabling real-time data exchange for Holobox experiences, 3D games, and quizzes.
- Independently fixed production **CORS** issues, improved API data handling, and kept the site stable on Render/OVH.
- Solved errors the deployment team ran into and sped up slow parts of the workflow so the client received the platform on time.

AI-Powered Personal Finance Tracker

[Live Site](#) | [GitHub](#)

- Built a full-stack finance app with **React.js**, **Node.js**, **Express.js**, **MongoDB**, **PostgreSQL**, and **JWT login**, giving users transaction management, search and filters, dashboards, and charts.
- Built a **Flask + Pandas** analytics service that studies past transactions and turns them into actionable spending insights.
- Structured user and transaction data in separate layers and connected the frontend, backend, databases, and analytics.

AI Medical Chatbot & Advanced AI Chatbot (RAG)

[Live: Advanced Chatbot](#) | [GitHub: Medical Chatbot](#)

- Built two AI chatbots: a medical chatbot that finds answers from medical documents, and an advanced chatbot that handles text and image chats while remembering the conversation.
- Built a **RAG pipeline** with **LangChain**: split documents into ~5,961 text chunks, converted them into MiniLM embeddings, and stored them in **FAISS** for fast retrieval.
- Set up **Ollama with Phi-3** for local inference, so the chatbot runs fully offline without depending on external AI APIs.
- Added **model fallback logic** to automatically switch models if one fails, along with better API error handling and saved chat history.

EDUCATION

B.Tech — Computer Science(AI & ML)

2022 – 2026

Panipat Institute of Engineering and Technology

CGPA: 7.95 / 10
